

Matters for consideration regarding inclusion of information in Event Summaries

There is no National Standard for what should be included in an Event Summary; all HCPs should consider matters of content and style when creating documents in MyHR.

For a Procedural Event Summary entry consider:

- Document name
- Name of procedure performed
- Where and when procedure was performed
- Prosthesis used
- Adverse drug reactions
- Anaesthetic complications
- Alerts
- Complications of procedure
- Infection control status
- Medication prescribed
- Medication or dietary changes
- Histopathology or radiology
